

VAULT CLOUD INTERCOM Visitor Registration System

DESCRIPTION

The VAULT CLOUD INTERCOM

Is a cloud based system with the latest resources, in accordance with the needs of companies that require maximum agility on temporary credential control. The Intercom is a crucial part of the infrastructure in any guarded neighborhood be it commercial or residential, condo, or landed homes. Without a working intercom system, the guards can only be expected to register visitors as they lack the necessary tools to confirm and verify visitors prior to allowing entry.

Unfortunately, many cabled systems fail over time due to hardware malfunction or degrading wires. These are very expensive to maintain and even more expensive to replace. VAULT CLOUD INTERCOM feature is a cost-effective solution that links the guardhouse directly to a resident's mobile phone giving better functionality and reach.

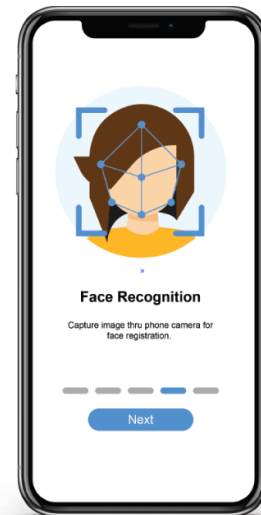

VAULT VMS CLOUD APP

From physical to digital credentials is another example of how FALCO is embracing a philosophy of sustainability and dematerialization in its security and access control offerings. VAULT VMS CLOUD app offering Face Recognition, License Plate Recognition and QR Code technology for access system.

Face technology is fast and accurate, instantly validating identity in order to protect access to sensitive areas. Vault VMS Cloud offers state of art integrated facial recognition technology and Vault VMS cloud apps for visitor to register and administrator or tenant to invite the user. Visitors can send up to 3 photos of their face and register it into our system.

Another interesting feature for Vault VMS Cloud integrate with Vehicle Licence Plate number recognition for administrator to handle visitor parking. When booking a visit, a visitor can provide their car license plate number and receive access which would securely grant access to the parking garage.

Third Party Integration

VAULT CLOUD INTERCOM

Visitor Registration System

BENEFITS

Innovative and Cost Savings

Vault cloud Intercom System is an innovative technology with disruptive changes in technology to the old or conventional INTERCOM SYSTEMS. Major disadvantage of conventional intercom systems are high costs of installation, maintenance, cabling and equipment and hence it's expensive and obsolete. Using Vault Cloud Intercom System saves costs by eliminating cabling installation, maintenance and equipment cost.

Optical Character Recognition (OCR)

OCR helps to fill up visitor's name and ID no. By taking a photo of the visitor's ID. This helps to speed up the registration process as well as making sure that visitor information is captured accurately without human error. VAULT CLOUD Intercom is currently compatible with Driving License and Identity Card

Whatsapp and Normal Call

High quality call so no miscommunication between security guards and residents. Most importantly, most of the telco companies are offering FREE calls. Others, security guard can use whatsapp call to minimize the cost.

Reregister Visitor

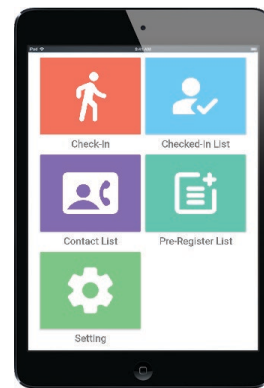

Vault VMS Cloud app is convenient to the owner to reregister the user with different date & time. Owner can set date range for visitor to visit again and guard will call the owner for confirmation again before let the visitor in.

Face Recognition

Vault Cloud VMS offers state of art integrated facial recognition technology and Vault apps application for visitor to register and administrator or tenant to invite the user. Visitors can send up to 3 photos of their face and register it into our system.

Visitor Notification

When a visitor is checked in or out of the residential, the respective house owner / family member / tenant will be receiving a notification on VAULT VMS CLOUD App in their smartphone. This feature provides another security layer whereby it prevents strangers from entering the residential by just sampling giving a house number.

User Friendly

Vault makes managing visitor information a breeze. Your employees have access to the information they need, making visitor management smooth and easy. Vault VMS Intercom is designed with simple and user friendly interface

Speedy Registration

Once the visitor actually gets their visit, their credentials can be ready and waiting for them. This functionality eliminates possible long lines at the front desk if numerous visitors arrive at the same time.

Mobile Application

Vault Cloud VMS mobile application is available on both IOS and Android platform. User credential like face and vehicle plate number are needed for registration. Thus, the invitation and pre-register are effortless for visitor and the owner.

Privacy Protection

Residents' Phone Number is protected. With the aid of Vault Cloud Intercom, resident's phone number will not be displayed on the caller page.
